

Sapio's Exemplar used to identify gene associated with Micronodular Adrenocortical Hyperplasia

York, PA, June 11, 2006 – Sapio Sciences LLC. Consulting Group, in collaboration with researchers from the National Institute of Child Health and Human Development, have published a paper in Nature Genetics in which Sapio's Exemplar software was instrumental in identifying a gene associated with Micronodular Adrenocortical Hyperplasia, a Pediatric Adrenal Cancer. The researchers discovered that a rare tumor of the adrenal glands appears to result from a genetic deficiency of an important enzyme involved in regulating cell division. Sapio's Exemplar software utilizes a powerful multi-method approach to genotyping analysis which demonstrated its effectiveness in this study.

- The abstract can be viewed here: <http://www.nature.com/ng/journal/v38/n7/abs/ng1809.html>

Sapio's consulting group is currently engaged in several high profile genotyping analysis projects. To inquire about our data analysis services offerings, please email: sales@sapiosciences.com or call (443) 759-3204.

About Sapio Sciences LLC

Sapio Sciences is a leading provider of bioinformatics software, enabling scientists to get biologically significant information from their sequence, gene and protein array experiments. Sapio will continue to break new ground in applying the most advanced AI technology available to problems within the biological domain. Sapio, with its extensive background in biological data analysis, also offers data analytics consulting for companies that want to outsource this function. Sapio has formed partnerships with Illumina, Expression Analysis and Genome Explorations. Sapio's products are 100% GeneChip compatible™ enabling seamless integration with the Affymetrix platform. Part of Sapio's mission is to accelerate discovery research for human, animal, and plant afflictions. To fulfill this mission, Sapio is committed to creating world class, innovative solutions to aid life science researchers.
